

LDES USE CASE DEVELOPMENT PANEL

Moderator: ZHIWEN MA

Panelists: KELYN WOOD (EPRI), LESLIE PONDER (B&V), WALT VERNON (MAZZETTI), TIM KOWALCHIK (UOED)

Introduction

Panelists:

Kelyn Wood (EPRI), Leslie Ponder (B&V), Walt Vernon (MAZZETTI), Tim Kowalchik (UOED)

Moderator: Zhiwen Ma

LDES NATIONAL CONSORTIUM

Technical background:

- Works on energy storage, hydrogen production, and concentrating solar power technologies
- Capability node lead in DOE Energy Material Network HydroGEN Advanced Water Splitting Material consortium.
- Research focuses on long duration energy storage using thermal energy storage and long-term energy storage using hydrogen.
- 80 peer-reviewed publications and 14 awarded patents.

Member of Research Staff
ASME Fellow

Use Case Descriptions

Seven Use Cases:	Descriptions/Example Applications	Technology Types	Stakeholders/Users
1. Load management Services/Energy Load Management	Behind-the-meter siting: • Peak shaving demand response, winter peak, resource adequacy, gas-electric coordination	Electrochemical energy storage, mechanical energy storage (Pumped storage hydro-PSH, etc.)	Large energy consumers (e.g., distribution centers, Industrials, Data center, peaking power, etc.), Energy services players
2. Firming for PPAs/ Improve Power Quality, Supply Reliability	LDDES with a low LCOS will be necessary energy resilience: • Operating reserve • balancing demand/supply	Electrochemical energy storage (batteries/flow batteries), thermal/chemical energy storage	Leading ESG (Environmental, Social, and Governance) customers
3. Microgrid resiliency/ Access to Electricity for Isolated Locations	Ensure reliable power and provide energy in times of a resiliency event, • Island black start • Islanded microgrids	Electrochemical energy storage (batteries/flow batteries), chemical energy storage	Local power authorities in isolated areas or island grid, Microgrid developers or integrators.
4. Utility Resource Planning/Outage Mitigation	Utility assets for flexibility and reliability, needs for firm, dispatchable power to balance energy demand/supply	Electrochemical energy storage (Various types of batteries), chemical energy (hydrogen, etc.)	Vertically integrated & T&D utilities
5. Transmission and Distribution Infrastructure Deferral	Energy storage as transmission with a longer nominal duration, fast ramp rate, and fast response time	Thermal/chemical energy storage, mechanical energy storage (PSH, Compressed Air Energy Storage)	Utilities, T&D developers, Equity infrastructure investors
6. Energy Market Participation/Reduced Electricity Supply Costs	Serve resource adequacy and reliability needs in shifting electricity from times of high supply to times of high demand	Electrochemical energy storage (batteries/flow batteries), thermal/chemical energy storage	RES / T&D developers, Asset owners (IPPs), Debt investors
7. Integration with Nuclear/ Electrification	Transportation (EV) • Electrified mobility, industry processes heat	Li-ion battery, thermal/chemical energy storage,	Transportation, heating, manufacturing, and buildings

P221: Bulk Energy Storage

Mission

Provide actionable research and innovation to advance large-scale, long-duration energy storage (LDES) with a focus on chemical, mechanical, and thermal technologies

Why EPRI's Bulk Energy Storage?

Value of Collaboration

The Bulk Energy Storage program works closely with multiple programs in the Generation and ED&CS sectors, 100+ energy storage technology developers, and leading R&D and government teams.

Program Manager

Justin Raade
+1 408-515-2983

Research Focus Areas

- Independent performance testing of LDES pilot plants and demonstrations
- Feasibility studies of energy storage projects
- Strategic insights on emerging LDES technology
- Design and safety reviews
- Energy storage integration to thermal power plants and industrial processes
- Request for proposal support
- Techno-economic and benefit assessments

Unique Insights

- 8 staff (3 Technical Executives) with total of 9 advanced degrees and 85 years experience combined at EPRI
- 500+ member meetings on energy storage in 2025
- 600+ papers, articles, and other published works

Impactful Content

- **Web-based software:** [Energy Storage Technology Database](#) and [Pilots and Demonstrations Database](#)
- **Cost and Benefits assessments:** [3002032493](#), [3002034550](#)
- **Performance studies:** [3002029757](#), [3002034105](#), [3002034104](#), and [3002029725](#)

Technology Application

- [Energy Dome Commercial Plant Testing](#)
- [Hydrostor Goderich Site Visit](#)
- [Commercial Readiness Levels for LDES](#)

WHO WE SERVE. WHAT WE DO.

Market segments

SOLUTIONS & SPECTRUM OF PROJECT LIFECYCLE SERVICES

BLACK & VEATCH SOLUTIONS PORTFOLIOS

OUR INTEGRATED SOLUTIONS TRANSFORM INFRASTRUCTURE

Infrastructure advisory

Industry-leading consulting services to support technology, operational, financial and regulatory challenges.

Infrastructure development

Site development, actionable plans and road maps to help clients meet their goals with the right tools, technology and resources.

Power generation

Integrated solutions that address our clients' most pressing issues around energy transition.

Power delivery

Preparing for long-term, sustainable growth through the planning, designing and building of an intelligent, secure and resilient grid.

Operating assets

Optimizing infrastructure for heavy asset owners. Combining industry knowledge, lifecycle experience and proven processes to streamline management.

Water

Complete and customizable technical, management and delivery expertise to solve any water infrastructure-related need.

Process solutions

Sustainable process solutions help clients lead the transition of resilient and affordable energy while accelerating pathways to global decarbonization.

LNG

Innovative and cost-effective solutions across the value chain leveraging decades of expertise, proprietary technologies (PRICO®) and partnerships for safe, on time EPC.

Environmental services

Solve complex environmental challenges by reducing regulatory complexity and compliance needs and ensuring budget and project schedules are met successfully.

Cybersecurity & resiliency

Providing operational cyber strategy and modernization solutions to serve the needs of complex technology ecosystems and improve the security of critical infrastructure.

Introduction

Research Director, Utah Office of Energy Development, 2025 – Present

Emerging Technology Strategist, UOED, 2024 – Present

B.S, M.S, Ph.D. (2024) Mechanical Engineering, University of Utah

Nanofabrication → Energy Storage

Outside Work: Climbing, Camping, Cooking, Skiing

LDES NATIONAL CONSORTIUM

Utah Office of Energy Development

Two main portions of the Office

Programs and Grants – Federal and state incentive, grants, education efforts

- High cost infrastructure tax credit, rural EV infrastructure, education

Research – In-house expertise on energy issues, guiding policy and initiatives

- Operation Gigawatt, Publications, Strategic Energy Plan, Data Analysis

Self-contained entities

- San Rafael Energy Research Center – Research center for energy-related projects like lithium recycling, supercritical CO₂
- Nuclear Consortium
- Advanced Energy and Nuclear Institute

LDES NATIONAL CONSORTIUM

HIGH COST INFRASTRUCTURE TAX CREDIT

The High Cost Infrastructure Tax Credit (HCITC) supports significant infrastructure investments in the state; bolstering the cost-effective and sustainable delivery of Utah's commodities to domestic and global markets.

ELIGIBLE PROJECTS:

- ✓ ENERGY DELIVERY
- ✓ TIER-III FUEL STANDARD COMPLIANCE
- ✓ MINERAL PROCESSING
- ✓ UNDERGROUND MINE INFRASTRUCTURE
- ✓ EMISSIONS REDUCTION
- ✓ WATER PURIFICATION
- ✓ WATER RESOURCE FORECASTING

UTAH OFFICE OF ENERGY DEVELOPMENT

NUCLEAR

Nuclear power is the generation of electricity through nuclear reactions, primarily using uranium as a fuel source. In nuclear power plants, uranium-235 atoms undergo nuclear fission, where they are split apart, releasing enormous amounts of heat and energy.

DEFINING ENERGY

Uranium

(a) Uranium is a silvery-white radioactive metallic chemical element with atomic number 92, naturally occurring in low concentrations in rocks, soil, and water. Uranium is the heaviest naturally occurring element which can be found abundantly on earth.

Current theories suggest that earth's uranium was formed billions of years ago in various supernovas or from the collision of neutron stars.

U.S. nuclear power plants are already among the safest and most secure industrial facilities in the world due to the industry's commitment to comprehensive safety procedures, robust training programs and stringent federal regulation that keep nuclear plants and neighboring communities safe.

Currently **94** commercial nuclear reactors help to power homes and businesses in **28** states.

Nuclear power plants produce nearly **1/2** of the nation's emissions-free electricity, making it the largest source of carbon-neutral power in the United States.

The uranium needed to satisfy an average Utahns lifetime energy needs can fit in a coffee mug.

While Utah does not currently have nuclear power in its energy mix, PacifiCorp has partnered with TerraPower to construct a nuclear power plant in Kemmerer, Wyoming. They have discussed replicating this power plant's design in Utah.

Radiation from nuclear fuel warrants attention, but is easily managed. All the nuclear waste currently in the United States can fit into a single football field.

HISTORY HIGHLIGHT During the Uranium boom of the 1950s, 8,000 Utahns were employed by the uranium industry and Moab was known as the "Uranium Capital of the World."

Opportunities
